WORK EXPERIENCES

Slingshot AI

Member of Technical Staff

New York, United States

Nov. 2024 – Present

- Led full end-to-end development of a foundation model on psychology, including **pre-training** on human therapy transcripts, **supervised fine-tuning** on golden conversations curated by clinical teams, and **alignment** using annotator-labelled preference datasets via policy optimisation algorithms such as DPO, PPO, and GRPO.
- Engineered scalable training infrastructure with hands-on experience in data preparation, cleaning, and multi-GPU distributed training; scaled SFT and DPO to **16k context** on **122B parameter** models using PEFT techniques.
- Developed value models to predict user engagement and retention metrics, applying offline RL optimisation against learned value functions to achieve **25% increase in user engagement** as measured by words spoken per session.
- Pioneered innovative training methods, including synthetic preference datasets selected by learned value functions, and adversarial training for realistic user simulation, enabling robust offline evaluation and multi-turn policy optimisation.
- Led design and development of an agentic prompt optimisation system in which agents perform diagnostic code execution and propose targeted prompt changes, driving a **+13.7% D1 retention improvement** over the quarter.
- Spearheaded initiatives to improve voice turn-taking experience; trained an audio-based endpointing model built on Whisper to detect end of turn, **reducing interruption rates by 70%** at equivalent latency targets.
- Developed internal tooling for annotation workflows and benchmark creation using TypeScript and Kotlin.
- First author of “DIAL: Direct Iterative Adversarial Learning for Realistic Multi-Turn Dialogue Simulation” ([arXiv:2512.20773](https://arxiv.org/abs/2512.20773)), “SAGE: Stochastic Prompt Optimization via Agent-Guided Exploration” ([arXiv:2606.18902](https://arxiv.org/abs/2606.18902)), and “CyclicJudge: Mitigating Judge Bias Efficiently in LLM-based Evaluation” ([arXiv:2603.01865](https://arxiv.org/abs/2603.01865)); all published at EMNLP 2026.

Unlikely AI

Senior Applied Scientist

London, United Kingdom

Jan. 2023 – Nov. 2024

- Architected core components of an advanced neurosymbolic AI platform combining LLMs with symbolic reasoning, prioritising accuracy, trustworthiness, and explainability for high-stakes decision-making in regulated industries.
- Engineered state-of-the-art semantic parsing and entity resolution models, achieving **50% improvement** over open-source alternatives through transformer fine-tuning on synthetic datasets for insurance and financial services applications.
- Revolutionised symbolic language design by integrating LLMs with symbolic solvers, delivering **99% precision** on tasks with **90% cost reduction**; this technology formed the foundation of the platform sold to Lloyds Banking Group.
- Achieved significant reduction in reasoning complexity through sophisticated optimisation of ontological reasoning using imitation learning and reinforcement learning techniques, enabling real-time inference at scale.

Chai Research

Founding AI Researcher

Palo Alto, United States

Dec. 2021 – Nov. 2022

- Pioneered the development of a breakthrough social AI platform from inception to achieving **200k+ daily active users** and **1M+ daily messages**, establishing one of the largest real-world LLM deployments at the time.
- Drove **60% D1 retention** through LLM fine-tuning and advanced prompt engineering on curated conversational datasets, along with user-centric research and implementation of **20+ app features** in Flutter.
- Implemented sophisticated encoder-based reward models trained on human preference data with rejection sampling, **doubling user engagement** as measured by median conversation length.
- Developed and deployed an offline reinforcement learning pipeline using PPO to maximise user engagement, pioneering RLHF techniques for social AI applications.
- Orchestrated large-scale deployment of cutting-edge LLMs on CoreWeave GPU clusters, building robust inference infrastructure serving hundreds of models across thousands of GPUs.
- Co-authored “Rewarding Chatbots for Real-World Engagement with Millions of Users” ([arXiv:2303.06135](https://arxiv.org/abs/2303.06135)).

Seamless Capital

Quantitative Researcher

Cambridge, United Kingdom

Aug. 2021 – Jan. 2022

- Developed sophisticated machine learning models (GBDT, MLP, transformers, and ensemble methods) for multi-market horse racing prediction, including Win/Place/Quinella, deployed in live automated trading on Betfair exchange.
- Engineered **50+ alpha signals** and specialised features through comprehensive historical data analysis, time-series feature extraction, and odds-implied probability calibration, resulting in **10% P&L improvement**.
- Implemented rigorous back-testing infrastructure with cross-validation, walk-forward optimisation, and Monte Carlo simulation for risk analysis, validated through Sharpe ratio, drawdown metrics, and live market execution performance.

UBS Group AG

Financing Quant Intern

London, United Kingdom

June 2021 – Aug. 2021

- Optimised Stock Borrow Loan (SBL) desk operations through automated trade booking, position reconciliation, and settlement.

- Developed sophisticated analytical tools on the Advanced Cloud Quantitative Analytics (ACQA) platform for repo rate curve construction, collateral valuation, and securities pricing models.
- Enhanced dividend futures marking efficiency through innovative curve fitting methodologies, including spline interpolation and bootstrapping for market-implied interest rate and forward dividend yield extraction.

EDUCATION

University of Cambridge, Christ's College

Cambridge, United Kingdom

Master of Arts

May 2025

Bachelor of Arts, Engineering

Oct. 2018 – June 2021

- Results: First Class Honours, ranking in the **top 4%** (12th out of 288 students), securing the prestigious Christ's College Scholarship for **three consecutive years**.
- Modules: Information and Computer Engineering, Electrical and Information Sciences, and Instrumentation and Control.
- Achievements: Christ's College Art Prize 2021, CUES Hackathon Champion 2021, VOMG Most Promising Musician 2017, and dual Silver Awards in Singapore Physics Olympiad (2014, 2016).

ACTIVITIES

Smartathon (Smart City Challenge) by Saudi Data & AI Authority (SDAIA)

Riyadh, Saudi Arabia

Second Prize Winner

Apr. 2023

- Secured **2nd place** among **14,731** teams globally, earning SAR **97,500** in prize money and presenting the solution at Riyadh.
- Developed an advanced pothole severity classification system combining YOLOv5 for real-time 2D object detection and DiffNet for monocular depth estimation and precise 3D surface reconstruction, enabling automated road maintenance optimisation.

Personal Projects

- Engineered and deployed a profitable tennis match prediction system on Betfair, consistently achieving **~5%** daily returns.
- Derived closed-form probability model for stop-limit order execution using Optional Stopping Theorem and exponential martingales on geometric Brownian motion, validated through Monte Carlo simulations, achieving **<1%** relative error.

SKILLS & INTERESTS

Languages: Chinese (Native), English (Fluent), Japanese (Beginner)

Programming: Python, TypeScript, JavaScript, Kotlin, Java, C++, SQL, Flutter, React, MATLAB

Machine Learning: LLM training & inference (PyTorch, HuggingFace Transformers, TRL, DeepSpeed, vLLM); PEFT techniques (LoRA, QLoRA); RLHF methods (DPO, PPO, GRPO)

Domains: Natural Language Processing, Computer Vision, Diffusion Models, Audio Processing (speech endpointing & generation)

Classical ML & Vision: XGBoost, LightGBM, OpenCV, scikit-learn, image segmentation, depth estimation

Infrastructure: Distributed training (multi-node, multi-GPU), Docker, Kubernetes, GCP, AWS, Weights & Biases, Nebius Cloud

Hobbies: Percussive fingerstyle guitar, piano, drum set, visual art, oil painting, photography, pool, tennis, table tennis, and travel
